Education

University Of Illinois Urbana-Champaign August 2024 – Expected: May 2028
Bachelor of Science in Computer Science + Linguistics *Urbana, IL*

- GPA: 3.63
- Relevant Coursework: Discrete Structures, Data Structures, Computer Architecture, System Programming
- Organizations: ACM SIGPwny, ACM GNU/Linux Users' Group, Skateboarding Illini, GTO Illini

Technical Skills

Programming Languages: Rust, Python, HCL, Bash, Regex, HTML, CSS, SQL, Typescript, Verilog, C++, C
Libraries/Frameworks: Actix Web, Flask, Cargo Lambda, Next.js, React, OCSF, Wrangler, Expo, React Native
Technologies: Terraform, Kubernetes, AWS, Cloudflare, Puppet, Docker, Elasticsearch, Git, Github Actions, FluxCD
Skills: CI/CD, Linux System Administration, Systems Design, Detection Engineering, ETL, Data Engineering, Application Security, Endpoint Security, Network Security, SOPS
Spoken Languages: English, Chinese (Mandarin, Fuzhounese)

Experience

DevOps Engineer March 2022 – Present
Mezzanotte Labs *Remote (Seasonal)*

- Architected a high-performance, high-availability, self-managed Kubernetes platform utilizing Terragrunt for IaC, FluxCD for GitOps-driven multi-cluster scalability, and SOPS for secure secret management
- Oversaw all company infrastructure and implemented IaC resulting in reduced provisioning and deployment time
- Collaborated directly with the lead engineer to architect and strategize products, resulting in performance improvements and an increased system scalability

Security Engineer March 2025 – August 2025
CVS Health (via Colossus Technologies Group) *Remote (Contract)*

- Developed a Rust prototype performing ingestion endpoint simulation (Splunk, Crowdstrike), OCSF normalization, and inline detection, designed to handle over 100TB of data per day with near real-time processing
- Identified unsustainable costs in the proposed AWS Flink architecture and independently built a production-grade Terraform alternative with EKS/Karpenter, projecting a 50% reduction in compute costs
- Collaborated with senior to principal level engineers to define core requirements and validate the architecture on various system designs, ensuring they addressed key operational pain points

Software Engineer Intern September 2020 – November 2021
Blackbot Security *Remote*

- Implemented multiple features for an in-house C2 framework in Python
- Authored four detection test cases for Red Canary's Atomic Red Team (12k+ stars), mapped to MITRE ATT&CK techniques T1560.002, T1486, T1059.006, T1053.006

Projects

High-Volume Log Ingestion Service | *Terraform, Rust, AWS* July 2024 – July 2024

- Spearheaded a Terraform project to transform a high-volume in-house log ingestion service from a Rust HTTP server to an AWS stack (Route 53, ALB, ACM, S3, AWS Lambda) using Cargo Lambda, projecting to reduce costs by 60%

Vulnerability Management Workflow | *Terraform, Python* November 2022 – November 2022

- Managed workflow by utilizing Github Actions for CI/CD, Terraform for IaC, OpenVAS for vulnerability scanning, and n8n to automate ticket creation
